

SCREW CONVEYORS

- Conveyors consist of augers, troughs, tubes, motor, drive system, and in/outlet chutes
- Screw conveyors are a reliable and efficient way to move a wide range of materials, from powders to granules to small objects
- Available in section flighting and ribbon flighting
- Made from mild steel or stainless steel
- Industrial use includes water treatment plants, food and chemical processors, biofuel, agricultural, etc.
- Thermal conveyors can efficiently heat or chill materials as they are conveyed to and from hoppers
